Bedford, MA (September 2, 2020) - Creative services company Design Pickle has announced Science from Scientists as the latest winner of their Random Acts of Design program in support of STEM literacy and education.

The Arizona-based company will provide the non-profit with three free months of their graphic design services, one free year of access to their premium stock library, FreshStock, as well as three months of marketing consultation.

"Design Pickle's resources will be game-changing for Science from Scientists this year, especially as the need for engaging and exciting, online and at-home STEM education increases," said Dr. Erika Ebbel Angle, Founder & Executive Director of Science from Scientists. "This opportunity couldn't have come at a better time for our organization and we can't wait to see what we achieve with Design Pickle's help."

Design Pickle launched Random Acts of Design during the first quarter of 2020 in an effort to become an ally to the non-profit community. By providing access to high-quality design, the platform hopes to ease the financial strain of producing marketing collateral.

"We're proud to make ourselves a resource to Science from Scientists through Random Acts of Design," said Russ Perry. "Our company's vision is to change lives through creativity, and as a software-as-a-service company, we're excited to help them amplify their community impact through STEM literacy programs."
